¹ Consult Product Manager on application or material selection

² High flow velocities may result in high head losses across this valve

³ Valve is susceptible to fouling

⁴ Not enough pressure differential to operate valve

⁵ Valve could be subject to rapid erosion – Contact Product Manager on application

⁶ Exposed mechanical accessories

⁷ Valve could be susceptible to slamming

This Check Valve Selection Chart should not be relied upon to select a valve exclusively. Please consult with an appropriate engineer. While information contained in this Check Valve Selection Chart is accurate to the best of our knowledge, it does not consider the specific use, location, elevation, pressure, turbidity, salinity, temperature, or other factors that may be relevant in your selection of a specific valve.
